FULL-STACK SOFTWARE ENGINEER | INFORMATION SYSTEMS SPECIALIST

PROFESSIONAL SUMMARY

Full-Stack Software Engineer and BCom Information Systems graduate with proven expertise in architecting resilient web platforms, secure backend REST APIs, and scalable cloud databases. Adept at bridging academic Information Systems rigor with rapid real-world execution, successfully delivering production digital platforms, custom client applications, and enterprise systems. Demonstrates end-to-end technical delivery capabilities across Next.js, C#/.NET Core, Python FastAPI, and PostgreSQL environments—managing complete solution lifecycles from initial requirement elicitation and system modeling down to DNS zone administration, custom domain routing, and serverless cloud deployment. Recognised for strong architectural discipline, rapid technical synthesis under tight timelines, and designing clean entity relationships that uphold data integrity across commercial retail, web, and internal business platforms.

CORE COMPETENCIES & SKILLS

- Full-Stack Web Architecture (Next.js, React)
- RESTful API Engineering (C#/.NET, FastAPI)
- Relational Databases (Neon Postgres, SQL Server)
- ORM Implementation (Prisma, EF Core)
- Enterprise Resource Planning (ERP) Principles
- Role-Based Access Control (RBAC) Security
- Version Control (Git / GitHub Workflow)
- Agile Software Development & Planning
- Domain-Driven System & API Design
- Serverless Hosting & Vercel Deployments
- Custom DNS & Domain Administration
- 4IR Systems Risk Mitigation & Governance

PROFESSIONAL EXPERIENCE

Independent Software Engineering & Freelance Development
07/2026 – Present

Full-Stack Software Developer & Technical Consultant

- Engineer, deploy, and maintain custom commercial web applications and digital platforms for business clients, managing full delivery lifecycles from architecture design to live serverless hosting.
- Architect full-stack software solutions utilizing Next.js, C#/.NET Core, Python FastAPI, Tailwind CSS, and cloud-hosted PostgreSQL/MongoDB infrastructures.
- Administer live DNS zone configurations, custom domain routing, and Vercel cloud hosting setups to ensure maximum platform accessibility, SSL security, and optimal uptime.
- Interface directly with stakeholders to translate operational workflows into intuitive digital ordering channels, service tier presentations, and automated intake forms.

University of Fort Hare / Technical Integrations
05/2026 – 10/2026

Technical Integration Assistant & Systems Developer

- Selected for technical assistant responsibilities following demonstrated excellence in undergraduate coursework, practical code evaluations, and software architecture tasks.
- Engineered an enterprise Binary Point of Sale (POS) and inventory platform featuring manager/cashier PIN role-based access control, live receipt rendering, and cloud database persistence.
- Designed and deployed BetwayDiskiFantasy Engine, a C# Web API utilizing Entity Framework and token validation for automated fantasy scoring, transfer logic, and leaderboards.
- Constructed full-stack simulation engines integrating the Google Gemini API for real-time LLM-driven event commentary, automated decision justifications, and state updates.

EDUCATION

Bachelor of Commerce (BCom) in Information Systems **2026**

University of Fort Hare • Core Focus: Systems Analysis & Design, ERP Frameworks, Requirement Elicitation, and Digital Transformation Lifecycles.
